(University of the City of Manila)
Intramuros, Manila

Microprocessor Lab

Laboratory Activity No. 2
Arduino and Tinkercad Interface

Score

Submitted by:
Apostol, Kim Adams B.
S 7:00am-10:00am / CPE 0412.1-1

Date Submitted

Submitted to:
Engr. Maria Rizette H. Sayo

I. Objectives

This laboratory activity aims to implement the principles and techniques of hardware programming using Arduino through:

- creating an Arduino programming and circuit diagram.

II. Method/s

- Perform a task problem given in the presentation.
- Write a code and perform an Arduino circuit diagram of a ring counter that display eight (8) LEDs starting from left.

III. Results

TinkerCad

Exercise 1: Write a code that does a ring counter display for eight (8) LEDs starting from left.

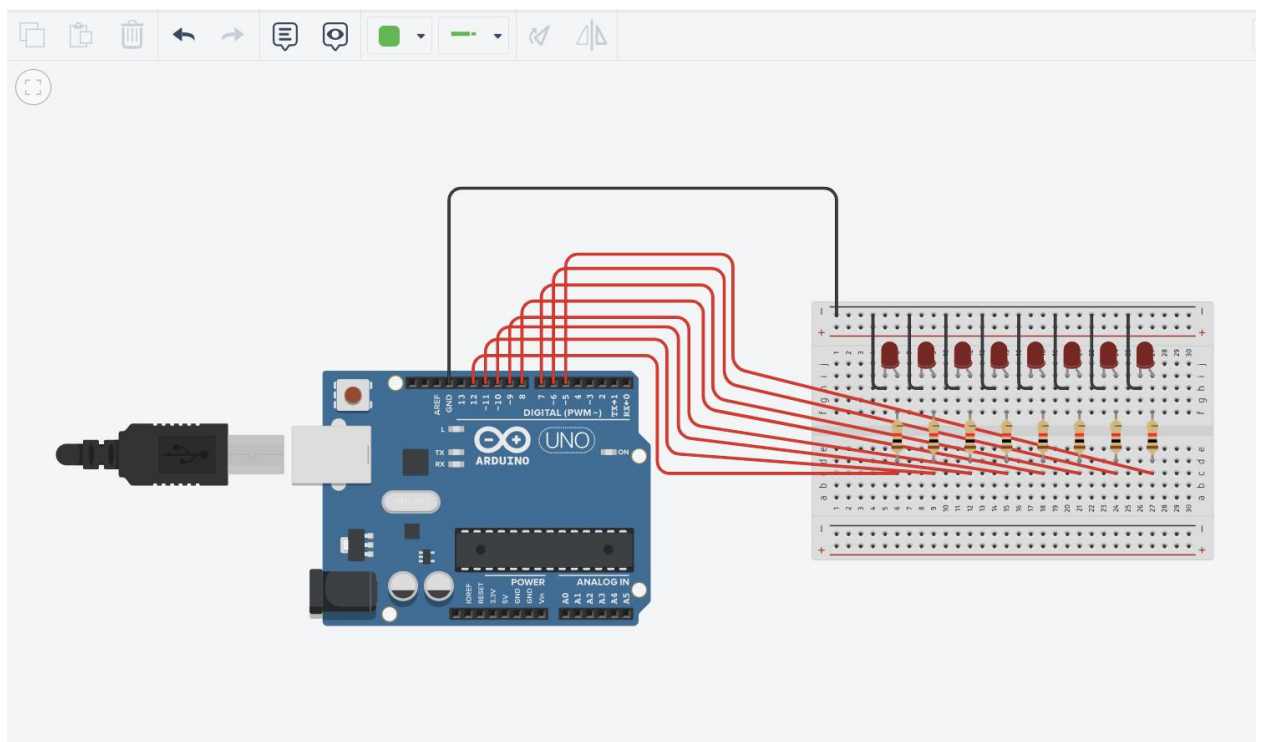

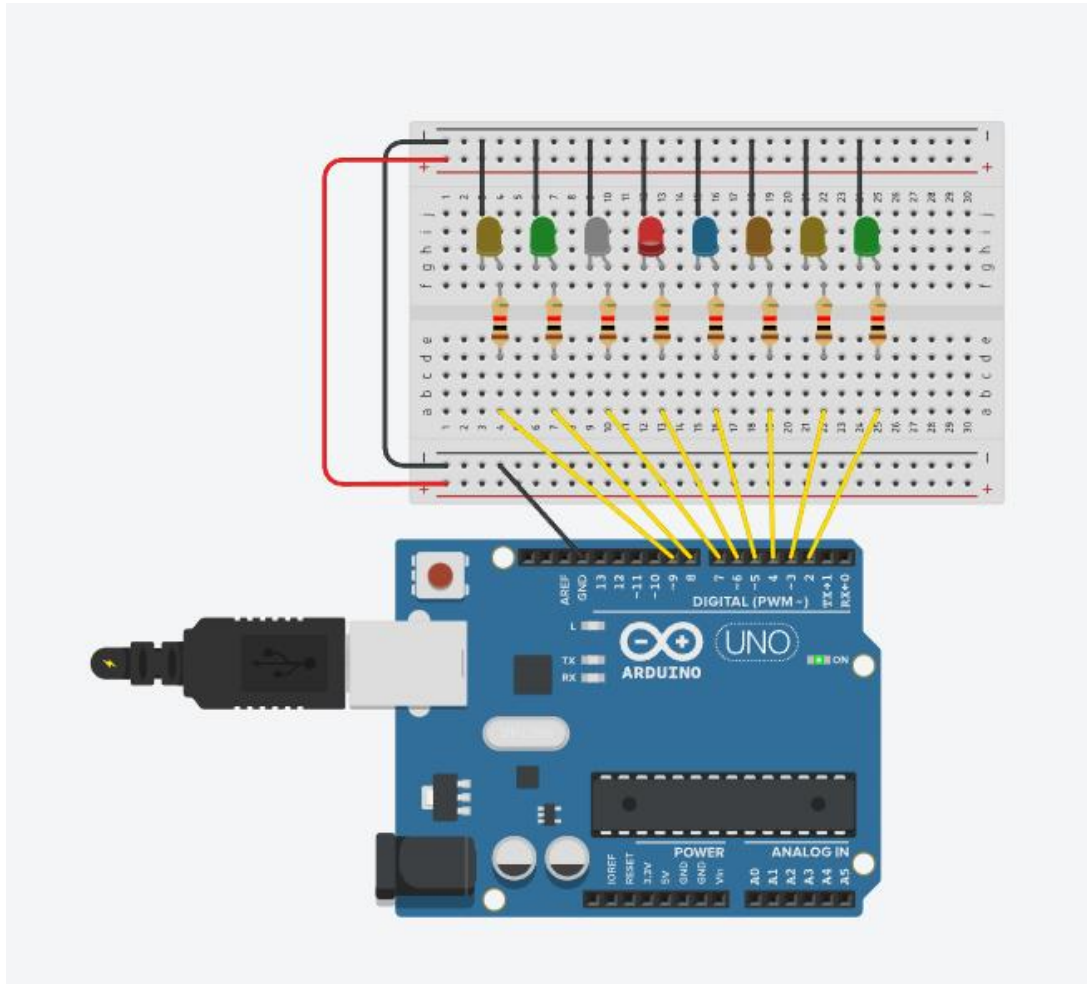

Figure No.1 Ring Counter Display Circuit Diagram

Components Used

1. 8 LEDs
2. Resistor

3. Breadboard

CODE:

```
1 // C++ code
2 //Ring Counter
3
4 void setup()
5 {
6   pinMode(2, OUTPUT);
7   pinMode(3, OUTPUT);
8   pinMode(4, OUTPUT);
9   pinMode(5, OUTPUT);
10  pinMode(6, OUTPUT);
11  pinMode(7, OUTPUT);
12  pinMode(8, OUTPUT);
13  pinMode(9, OUTPUT);
14  Serial.begin(9600);
15 }
16
17 void loop()
18 {
19
20   digitalWrite(2, HIGH);
21   delay(500); // Wait for 500 millisecond(s)
22   Serial.println("The LED2 is High");
23   digitalWrite(2, LOW);
24   delay(500);
25   Serial.println("The LED2 is Low");
26
27   digitalWrite(3, HIGH);
28   delay(500); // Wait for 500 millisecond(s)
29   Serial.println("The LED3 is High");
30   digitalWrite(3, LOW);
31   delay(500);
32   Serial.println("The LED3 is Low");
33 }
```

```

34 digitalWrite(4, HIGH);
35 delay(500); // Wait for 500 millisecond(s)
36 Serial.println("The LED4 is High");
37 digitalWrite(4, LOW);
38 delay(500);
39 Serial.println("The LED4 is Low");
40
41 digitalWrite(5, HIGH);
42 delay(500); // Wait for 500 millisecond(s)
43 Serial.println("The LED5 is High");
44 digitalWrite(5, LOW);
45 delay(500);
46 Serial.println("The LED5 is Low");
47
48 digitalWrite(6, HIGH);
49 delay(500); // Wait for 500 millisecond(s)
50 Serial.println("The LED6 is High");
51 digitalWrite(6, LOW);
52 delay(500);
53 Serial.println("The LED6 is Low");
54
55 digitalWrite(7, HIGH);
56 delay(500); // Wait for 500 millisecond(s)
57 Serial.println("The LED7 is High");
58 digitalWrite(7, LOW);
59 delay(500);
60 Serial.println("The LED7 is Low");
61
62 digitalWrite(8, HIGH);
63 delay(500); // Wait for 500 millisecond(s)
64 Serial.println("The LED8 is High");
65 digitalWrite(8, LOW);
66 delay(500);
67 Serial.println("The LED8 is Low");
68
69 digitalWrite(9, HIGH);
70 delay(500); // Wait for 500 millisecond(s)
71 Serial.println("The LED9 is High");
72 digitalWrite(9, LOW);

```

IV. Conclusion

Finally, this laboratory activity enabled us to effectively apply the principles and techniques of hardware programming using Arduino. We successfully created an Arduino program and circuit diagram that displayed eight LEDs sequentially from left to right. This hands-on experience not only expanded our knowledge of Arduino programming and circuit design, but it also sharpened our practical skills in controlling hardware components with software logic. It was a beneficial exercise that significantly increased our knowledge and proficiency in the field of embedded systems and electronics.
